Business Processes Tova Milo, Daniel Deutsch, 2022-06-01 While classic data management focuses on the data itself, research on Business Processes also considers the context in which this data is generated and manipulated, namely the processes, users, and goals that this data serves. This provides the analysts a better perspective of the organizational needs centered around the data. As such, this research is of fundamental importance. Much of the success of database systems in the last decade is due to the beauty and elegance of the relational model and its declarative query languages, combined with a rich spectrum of underlying evaluation and optimization techniques, and efficient implementations. Much like the case for

traditional database research, elegant modeling and rich underlying technology are likely to be highly beneficiary for the Business Process owners and their users; both can benefit from easy formulation and analysis of the processes. While there have been many important advances in this research in recent years, there is still much to be desired: specifically, there have been many works that focus on the processes behavior (flow), and many that focus on its data, but only very few works have dealt with both the state-of-the-art in a database approach to Business Process modeling and analysis, the progress towards a holistic flow-and-data framework for these tasks, and highlight the current gaps and research directions. Business Process Analysis Geoffrey Darnton,Moksha Darnton,1997 This is a ground-breaking book, primarily in its successful attempt to operationalise and provide empirical foundations for procedures for radical change previously developed only intuitively. The book is supported by prominent academics and practitioners in the field, including Jim Short (LBS), Raul Espejo, Dan Teichroew (Michigan), and others. It should become the standard reference for managers and consultants in BPR.

Performance Gap Analysis Maren Franklin,2006 Proposing any performance or training solutions requires rigorous analysis based on data, not speculation. Conducting a front-end analysis-a process for determining why a perceived performance gap exists and how to close the gap-enables workplace learning and performance professionals to find successful solutions. This Infoline describes how to carry out the two distinct analysis processes that go into a front-end analysis: a gap (or performance) analysis and root cause analysis. The first process determines if a performance problem exists. The second process identifies the true root cause of the issue. Helpful sidebars explain the analysis sequence, when to conduct a gap analysis, how to define performance gaps without bias, and factors that influence performance. In addition, the job aid provides a checklist of questions for a training needs analysis.

The second half of the book presents the overall toolbox, followed by one chapter for each phase of the overall improvement model. For each of these phases, a selection of suitable tools is presented with background, steps to use them, and an example of their use.
